Paris, May 29, 2024

2023/2024 Annual Results

Committed to its transformation, Tereos achieves a solid performance and implements an ambitious decarbonization strategy

- Tereos confirms the robustness of its model and the success of its diversification strategy with the publication of historic results for the 2023/2024 financial year in a favourable market context.
- The Group maintains its momentum thanks to its agricultural, industrial and sales performance and presents record financial indicators:
 - c revenues driven by a €7.14 billion increase in prices across all segments (+9%),
 - o adjusted EBITDA up +15% (€1.13 billion), confirming Tereos' operational excellence,
 - o recurring operating income (EBIT) of €836 million, compared with €664 million in FY 2022/23,
 - o a continued reduction in structural debt (net debt excluding working capital) to €1.03 billion, representing a significant drop of €176 million compared with March 2023.
- Against a challenging backdrop for the agricultural sector (regulatory constraints, competitive pressure, adverse weather conditions), Tereos' success ensures long-lasting support for its cooperative members with increased remuneration for beet and alfalfa, coupled with a substantial divided.
- Drawing on its cooperative values which are clearly focused on the future, the Group's unique identity is reflected in Tereos' corporate purpose: "Cultivating a shared future for the Earth and People by meeting essential daily needs".
- This purpose can be seen in a strategy geared towards a low-carbon model, built on an ambitious road map to decarbonize the Group's activities, as well as value-creating solutions for cooperative members, employees and customers.

"We operate in a highly complex and fast-moving market environment, in which our cooperative members are up against regulatory pressure, adverse weather conditions and heightened competition. In keeping with our cooperative values, we are working together to take decisive action, to be the voice of agriculture and encourage the defence of our agricultural sovereignty serving everyday needs: food, energy and health. It is by working together that we will achieve a sustainable French agricultural model. Within the Board of Directors, we are fully committed to continuing to build, in close cooperation with the Management Committee, an efficient and robust cooperative which is true to its DNA and values." commented Gérard Clay, Chairman of Tereos' Board of Directors.

"Tereos continues to position itself as a leading global player and key partner in its markets in terms of food, energy and health. We are able to achieve this thanks to an in-depth transformation, which now allows us to improve our competitiveness through operational, industrial and sales excellence. Our record 2023/24 financial results reflect our ability to benefit from changes in the market and adapt efficiently to them. It is a testament to the ambitious collective effort between cooperative members and employees. Encouraged by these results, we are now focused on the future as we take bold and pragmatic steps to continue to develop new growth drivers." **explained Olivier Leducq, Tereos' Managing Director.**

Strong foundations and a clear corporate purpose

Committed to an operational and strategic transformation that is delivering results, Tereos has once again achieved an excellent industrial and sales performance over the 2023/24 campaign. This momentum provides a solid base for continuing its profitable growth trend while maintaining its financial discipline.

This return to financial robustness, which has been confirmed over the financial years, provides the Group with greater flexibility to support its cooperative members in a volatile and complex market affected by stricter regulations, increasingly adverse weather conditions and heightened competition.

This support includes decisive action to diversify the agricultural model, enhance the value of crops and thus reduce cooperative members' exposure in order to continue to build a sustainable agricultural model. Tereos has thus announced:

- a marked increase in the price paid for beet from €43.10/t to €48.16/t in 2024, and for alfalfa from €102/t DM in 2022 to €144/t DM in 2023.
- This remuneration includes the payment of a dividend thanks to the success of its diversification.

Therefore and at a time when our agricultural cooperative has extensively adapted to societal changes and as Tereos looks to the future for all of its activities, the Board of Directors and Management Committee are committed to asserting our Group's raison d'être as the foundation that underpins past, present and future decisions.

This purpose drives the cooperative's momentum and embodies our identity. It is also a measure of consistency and a commitment to our ecosystem:

"Cultivating a shared future for the Earth and People by meeting essential daily needs".

This corporate purpose will be showcased by all Tereos cooperative members and employees through our guiding promise: **"Day by day, cultivating the future".**

A financial performance which confirms the strategic choices made by Tereos

Consolidated **revenues** totalled €7.14 billion in FY 2023/24, up 9% at current and constant exchange rates, compared with €6.56 billion in the previous financial year.

Consolidated¹ adjusted EBITDA was €1.13 billion for the current financial year, up 15% at current and constant exchange rates, compared with €981 million in FY 2022/23.

Consolidated **recurring operating income (EBIT)**² amounted to €836 million for FY 2023/24, compared with €664 million in FY 2022/23.

Net profit was €448 million, compared with €161 million for FY 2022/23.

¹ Please see the definition of adjusted EBITDA in the financial appendices.

² EBIT excluding non-recurring items (-€252 million in FY 2022/23 and -€46 million in FY 2023/24).

Results were driven by the increase in sugar prices and, across all divisions, by the successful execution of the sales, hedging and cost management strategy, which continues to allow the Group to protect its margins against a still volatile backdrop and price standardization, in particular in the starch products division.

Moreover, in line with efforts to reduce debt in recent years, **the Group continues to apply its structural debt reduction strategy** – debt excluding working capital (WCR). Structural debt was thus down from \pounds 1.21 billion last year to \pounds 1.03 billion for the 23/24 financial year. Net debt at March 31, 2024 stood at \pounds 2.37 billion compared with \pounds 2.70 billion at March 31, 2023, a decrease of \pounds 329 million. The Group's **leverage** at the end of March 2024 stood at 2.1x, representing an improvement compared with the end of March 2023 (2.8x).

Further information regarding Tereos' financial performance in the appendices.

Clearly focused on the future, Tereos has implemented an ambitious decarbonization strategy which is a source of growth for the cooperative and its customers

Tereos has drawn up and launched an ambitious plan to accelerate its decarbonization strategy. It is aiming for zero net emissions across its entire value chain by 2050, from its agricultural activities right through to the sale of its products, in line with SBTi FLAG targets. Thus, over the next nine years, the cooperative will invest €800 million to halve greenhouse gas emissions in its industrial and agricultural activities, including a 65% reduction in greenhouse gas emissions generated by its European industrial sites (Scopes 1 & 2) by 2032/33. This commitment applies to the entire value chain. For example:

- Scopes 1 & 2: decarbonization program for starch and sugar manufacturing plants (78 projects across 16 industrial plants, rolled out on the basis of multi-year plans combining a decrease in energy consumption with a transition from fossil fuels to renewable energy, notably electric with limited use of biomass), with a target to decrease CO2 emissions by 1.3 million tonnes by 2032/33;
- Scope 3 "Transport": reduction in emissions relating to the transport of raw materials in Brazil, through the use of low-carbon fuel, and in Europe with the FRET 21 commitment;
- Scope 3 "Agriculture": gradual development of regenerative agriculture with the introduction of initiatives to transition to a more resilient, low-carbon and soil- and biodiversity-friendly model, such as the financing over the next 12 months of **1,000 carbon audits** at the cooperative level from 2024. This is in line with the TRANSITIONS approach launched in September 2023 and supported by the cereal cooperative group Vivescia and its partners. Moreover, Tereos has reinforced its commitments to agro-ecological transition initiatives by joining "Pour une Agriculture du Vivant", a French non-profit organisation supporting a new agriculture and food model. Tereos aims to roll out regenerative agriculture practices across **20% of its cooperative members' beet surface areas** over the next nine years.

Through this strategy, Tereos hopes to capitalize on its strengths and assets by offering its customers low-carbon plant resources produced by its cooperative members and processed by its employees. This approach meets both new customer needs and the Group's ability to develop new offers to decarbonize oil-based industries. The partnership with Futerro, the only one of its kind in Europe, is a perfect example of Tereos' ability to forge strong alliances with secondary-processing players, and thus step up the development of new bio-sourced solutions.

About Tereos

The Tereos cooperative group, a union of 10,700 cooperative members, has a recognized know-how in the processing of beet, sugarcane, cereals and alfalfa. Through 41 industrial sites, a presence in 15 countries and the commitment of its 15,800 employees, Tereos supports its customers close to their markets with a broad and complementary range of products. In 2023/24, the Group posted revenues of ξ 7.14 billion.

Net profit	(66)	101			161	448	178%	178%

Consolidated **revenues** rose to €7,143 million in financial year (FY) 23/24, up 9% at current and constant exchange rates from €6,557 million in the previous financial year.

Consolidated **adjusted EBITDA** was €1,128 million for the current financial year, up 15% at current and constant exchange rates, compared with €981 million in FY 22/23.

Consolidated **recurring operating income (EBIT)** amounted to €836 million for FY 23/24, compared with €664 million in FY 22/23.

Results were driven by the increase in sugar prices and, across all divisions, by the successful execution of the sales, hedging and cost management strategy, which continues to allow the Group to protect its margins against a backdrop of high inflation and price stabilization, in particular in the starch products division.

2. RESULTS BY DIVISION

SUGAR AND RENEWABLES EUROPE

In **France**, yields in the 2023/24 campaign were slightly above the average for the past five years. Beet volumes were therefore down only 5% compared with the 2022/23 campaign, at 14.0 million tonnes, despite a 9% decrease in planted surface areas.

Revenues for the Sugar and Renewables Europe division amounted to €2,725 million for FY 23/24, up 9% at current exchange rates from €2,503 million in FY 22/23.

The division's **adjusted EBITDA** was €359 million in FY 23/24, up 22% at current exchange rates from €294 million in FY 22/23.

The division's **recurring EBIT** totalled €220 million in FY 23/24, compared with €201 million in FY 22/23.

The division's results are mainly driven by the increase in sugar prices achieved through an adapted sales strategy, coupled with the successful execution of the hedging strategy, notably for gas and ethanol.

SUGAR AND RENEWABLES INTERNATIONAL

In Brazil, the sugar harvest ended on December 19, 2023 with a record processed sugarcane volume of 21.1 million tonnes, a marked increase compared with the 17.3 million tonnes recorded in the 2022 campaign.

Revenues for the Sugar and Renewables International division amounted to €1,518 million for FY 23/24, up 18% at current and constant exchange rates from €1,282 million in FY 22/23.

The division's **adjusted EBITDA** was €411 million in FY 23/24, up 59% at current and constant exchange rates from €258 million in FY 22/23.

The division's **recurring EBIT** totalled €286 million in FY 23/24, compared with €130 million in FY 22/23.

The division's results were mainly driven by the increase in global sugar prices and the improvement in production volumes. Conversely, ethanol prices fell compared with the previous year owing to an increase in volumes available on the local market. This resulted from the higher volumes produced during an excellent sugarcane campaign in Brazil in 2023.

STARCH, SWEETENERS AND RENEWABLES

Revenues from the Starch, Sweeteners and Renewables division amounted to $\leq 2,352$ million in FY 23/24, down 6% at current exchange rates from $\leq 2,499$ million in FY 22/23.

The division's **adjusted EBITDA** was €332 million in FY 23/24, down 18% at current exchange rates from €403 million in the previous financial year.

The division's **recurring EBIT** totalled €257 million in FY 23/24, compared with €311 million in FY 22/23.

FY 23/24 results were down compared with FY 22/23 – but remained at historically high levels, with a slight increase in market share and an efficient gas and ethanol hedging strategy, against a backdrop of lower demand in FY 23/24 combined with additional logistics costs due to the industrial incident at the Nesle plant in November 2023.

3. NET DEBT

Net debt at March 31, 2024 stood at $\leq 2,371$ million, compared with $\leq 2,700$ million at March 31, 2023, a decrease of ≤ 329 million. Excluding Readily Marketable Inventories³ (≤ 606 million that can be converted into cash at any time), the Group's adjusted net debt totalled $\leq 1,765$ million.

The decrease in net debt compared with March 31, 2023 was due to a positive operational cash flow, which largely covers CAPEX, combined with a decrease in working capital. Working capital excluding margin calls was almost flat (limited increase) compared with March 2023, as forecast in our earnings press releases over recent quarters. The change in margin calls had a positive impact on cash flow.

The Group's leverage at the end of March 2024 improved to stand at 2.1x.

³ The amount of "Readily Marketable Inventories" at March 31, 2024 included: (i) €551 million in finished products, of which €518 million in sugar and €33 million in ethanol; (ii) €46 million in raw materials, of which €7 million in wheat, €29 million in corn and €10 million in sugar to be processed; (iii) €9 million in coal and gas.

In line with the targets set in June 2021, the Group has reduced its structural debt (excluding working capital).

At the end of March 2024, the Group's financial security reached €1,256 million, consisting of €601 million in cash and cash equivalents and €655 million in undrawn confirmed long-term credit lines.

Net debt at March 31, 2024 breaks down as follows.

Net debt	March 31, 2023	March 31, 2023	March 31, 2024	Current	Non-current	Cash and cash equivalents		
€m	(Reported)	(Restated)	(Restated)					
Net debt	2,700	2,700	2,371	493	2,479	-601		
Net debt/EBITDA ratio	2.4x	2.8x	2.1x					
Net debt/EBITDA ratio excl. RMI*	1.8x	2.0x	1.6x					

* Readily Marketable Inventories: €754 million at the end of March 2023 and €606 million at the end of March 2024

Net debt	March 31, 2023	March 31, 2023	March 31, 2024	
€m	(Reported)	(Restated)		
Net debt	2,700	2,700	2,371	
Working capital (WCR)	1,420	1,490	1,337	
Structural debt (excluding working capital)	1,280	1,210	1,034	

4. IMPORTANT NOTES AND POST-CLOSING EVENTS

RESTATEMENT OF INTERCAMPAIGN COSTS

Since Q1 23/24, the Group has changed its accounting method for intercampaign maintenance expenses, bringing them into line with the methods adopted by European sector comparables: these costs, previously accounted for as CAPEX and depreciated over the following production period, are now accounted for under inventories and cost of goods sold (COGS). This accounting change (no cash impact) has resulted in a decrease in depreciation and amortization (D&A) to offset changes in costs (non-D&A), leading to a reduction in reported EBITDA. It also resulted in an increase in working capital and a decrease in CAPEX. Operating income (EBIT) and net profit have not been affected.

INDUSTRIAL INCIDENTS

As announced in the previous earnings press release, in the context of its operations, Tereos suffered two major industrial incidents at the Bucy-le-Long and Nesle plants on October 9 and November 9, 2023, respectively. The incidents were quickly contained as a result of the level-headed actions of response teams at the plants and the help of firefighters. None of Tereos' teams were injured and the Group reiterates that safety remains its priority. The Group is currently making every effort to resume operation at the damaged facilities as soon as possible. All industrial, sales and logistics teams are doing their utmost to find solutions and honour our commercial commitments to customers and partners.

SALE OF B2C ACTIVITIES IN THE UNITED KINGDOM

On November 2, 2023, Tereos announced that it had signed an agreement for the sale of the businessto-consumer (B2C) activities of its Tereos UK and Ireland (TUKI) production plant in Normanton, West Yorkshire to T&L Sugars Limited (TLS). The transaction relates only to B2C activities. Tereos will keep its industrial B2B activities, which will continue as TUKI. The Tereos UK plant packs and distributes white granulated, baking and specialty sugars to food retailers and wholesalers in the UK, under the "Whitworths Sugar" brand and private label brands. Finalization of the transaction will take place upon completion of the UK Competition and Markets Authority approval process.

Adjusted EBITDA corresponds to net profit before income tax, the share of income from equity affiliates, financial result, depreciation, amortization and impairment, goodwill impairment, bargain purchase gains and price supplements. It is also restated for changes in the fair value of financial instruments, inventories, and sale and purchase commitments, except for the portion of these items that relates to trading activities, changes in the fair value of biological assets, the seasonal effect and non-recurring items. The seasonal effect corresponds to the temporary difference in the recognition of depreciation and amortization charges and price supplements between the Group's financial statements under IFRS and the Group's management accounts. Adjusted EBITDA is not a financial indicator defined as a measure of financial performance under IFRS and may not be comparable to similar indicators referred to using the same term by other companies. Adjusted EBITDA is provided for additional information and cannot be considered a substitute for operating income or operating cash flow.

E. MARKET DEVELOPMENTS

WORLD SUGAR MARKET

The financial year ended with an NY11 sugar price at 22.52 USDcts/lb at March 31, 2024, representing a 1.2% increase, impacted by strong volatility due to extreme weather events. Drought in Asia at the beginning of the financial year maintained pressure on available sugar, pushing prices up. The increase in sugar production volumes following the decision by the Indian government at the end of 2023 to reduce target ethanol production volumes had led to a sharp decrease in sugar prices. In Q4 23/24, the market continued its downwards trend, impacted by the buoyant outlook for production volumes, notably in India and Pakistan.

SUGAR EUROPE

Production on the European sugar market was up 7% year on year. The deficit decreased as the beet acreage remained virtually unchanged (very slight increase), combined with an increase in yields.

Nevertheless, uncertainty over production has maintained the upwards trend for some time, pushing up sugar prices to &856/t EXW in December 2023. After this period, high levels of imports triggered a downwards trend, with the price in March 2024 reaching &844/t EXW.

In terms of outlook, the slowdown in import levels, including a limitation on imports from Ukraine, coupled with a major export programme, should enable inventories to return to normal in the months ahead.

ETHANOL BRAZIL

Average ESALQ ethanol prices changed very little during Q4 23/24, reaching R\$2.07 per litre, almost flat compared with the previous quarter. However, this price was down 21.3% on the previous financial year, due to a 16% increase in volumes available on the French market and relatively weak demand. Prices were nonetheless underpinned by a potential reduction in sugarcane volume (relatively low rainfall over a few months) and an increase in the share of sugar in the "sugar x ethanol" mix of around 3 points for the 2024/25 campaign.

ETHANOL EUROPE

European Ethanol T2 prices were down 21% over FY 23/24 to near €637/m3 in March 2024. This decrease was mainly due to significant imports, which contributed to the high ethanol inventory levels in Europe.

CEREALS

The cereals market was impacted by a largely downwards trend over FY 2023/24 due to pressure from abundant quantities of wheat and corn in the main producing countries.

Wheat: Strong competition from Russian-sourced wheat slowed European exports and therefore fed the decline in MATIF prices throughout the year. The downwards trend has accelerated since the beginning of 2024, pushing prices to around €203/tonne at March 31, 2024, i.e. 22% lower over the financial year. FY 24/25 has started on an upwards trend, mainly due to uncertainty surrounding crop volumes in the European Union and Russia.

Corn: With a supply/demand balance showing a large surplus in FY 23/24 (thanks to record production in the United States), the price of MATIF corn fell from €258/tonne on April 1, 2023 to €193/tonne on March 31, 2024. The end of FY 23/24 saw an increase in prices, due to uncertainty surrounding production volumes in Argentina and Brazil.

GAS EUROPE

The downwards trend on gas prices observed since the end of 2022 persisted throughout 2023, reaching its lowest level since 2021 at the end of the year. Europe ended 2023 with a record storage level (86%), driven by (i) significant imports via gas pipelines and (ii) strong LNG imports in Europe due to an increase in liquefaction/regasification capacities and the absence of competition from Asia.

Moreover, the weak European demand which began in 2022 continued in 2023 in both residential and industrial segments, as well as for electricity production.

Volatility has been lower since mid-November 2023, due to (i) a market which appears less sensitive to news which could affect the supply/demand balance and (ii) strong confidence in the EU's ability to fulfil 100% stock replenishment targets before the beginning of winter 24/25.

Nevertheless, despite this period of calm and the bearish outlook, risks will remain on the supply/demand balance until new LNG liquefaction/regasification capacities are operational (from 2025).
